time limit per test: 1 second
memory limit per test: 256 megabytes

Forbidden Keywords for the Quiz: sort, open, file, creat(, fstream, thread, process, system(, exec(

You are given an array of N integers. Determine whether the given array is in non-decreasing order.

An array is said to be in non-decreasing order if, for every valid index i such that $1 \le i < N$ (1-based indexing), the condition $A[i] \le A[i+1]$ holds true.

Example: $[1, 2, 4, 5]$, $[1, 2, 2, 4, 4, 5]$ are in the non-decreasing order because every element is less than or equal to the one after it.

Input

The first line contains a single integer T $(1 \le T \le 100)$ — the number of test cases. Each testcase contains two lines.

In each test case, the first line contains a single integer N $(1 \le N \le 10^4)$ — the number of elements in the array. The second line contains N integers separated by spaces $a_1, a_2, a_3 \ldots a_n$ $(1 \le a_i \le 10^6)$ — the elements of the array.

Output

For each test case, print `YES` if the array is in non-decreasing order. Otherwise, print `NO`.

Example

input Copy

```
3
4
1 2 3 3
4
1 5 2 6
1
5
```

output Copy

```
YES
NO
YES
```
